

CSCI 4041 Extra Credit 1 (0.5 points)

Assigned: 9/21/16 Due: 10/3/16

Given the sequence [20,18,16,14,12,10,8,6,4,2], show all the steps of four algorithms (it will be announced next week which algorithms these will be) and hand-in hardcopies of all these steps up to the final result.

For an additional 0.5 points, (same due date) implement these algorithms (without copying from us or the web) in Python or C++. You will need to hand-in your code and the intermediate and final results as well.
